The S-5-Q clamp was specifically developed to accommodate metal roof panels having a large, round “bulb” seam configuration up to 29 mm. It will also fit smaller bulb-shaped profiles that were not seamed correctly, allowing the seam to be utilized without modification.

The clamp’s two-piece design allows it to be easily installed anywhere along the length of the rib, making installation a snap! Just place the clamp on the seam, position the insert piece, and tighten the setscrews. Go to www.S-5.com/tools for information about properly attaching S-5!® clamps.

After the clamp is installed, affix ancillary items using the top bolt provided. The S-5-Q is perfect for use with S-5! ColorGard® snow retention system and other heavy-duty applications.

S-5-Q Mini Clamp

The S-5-Q Mini is a bit shorter than the S-5-Q and has one setscrew rather than two. The mini is the choice for attaching all kinds of rooftop accessories: signs, walkways, satellite dishes, antennas, rooftop lighting, lightning protection systems, solar arrays, exhaust stack bracing, conduit, condensate lines, mechanical equipment—just about anything!*
The **S-5-Q and S-5-Q Mini clamps** are each furnished with the hardware shown to the right. Each box also includes a bit tip for tightening setscrews using an electric screw gun. The structural 6000 series aluminum attachment clamp is compatible with most common metal roofing materials excluding copper. All included hardware 3000 series is stainless steel. Please visit [www.S-5.com](http://www.S-5.com) for more information including CAD details, metallurgical compatibilities, and specifications.

The S-5-Q clamp has been tested for load-to-failure results on a variety of bulb-shaped standing seam roof profiles from leading panel manufacturers. The independent lab test reports found on our website at www.S-5.com prove that S-5!® holding strength is unmatched in the industry.

**Example Profiles**

---

**Please note:** All measurements are rounded to the second decimal place.

---

The strength of the S-5-Q clamp is in its simple design. The patented setscrews will slightly dimple the metal seam material but will not puncture it—leaving roof manufacturers’ warranties intact.
